

David Levine, PT, PhD, DPT, MPH, FAPTA, is a Professor and the Walter M. Cline Chair of Excellence in Physical Therapy at the University of Tennessee at Chattanooga. He has been working and conducting research in many fields including electrophysical agents since the early 1990's. He continues to practice in outpatient physical therapy in addition to his university position. In 2018 he was named a Catherine Worthingham Fellow of the American Physical Therapy Association. Dr. Levine has published in numerous peer-reviewed journals and conference proceedings with over 130 publications. He currently serves as the president of the Biophysical Agents (BPAs) Special Interest Group of the APTA and has been active in its mission. In the past year the SIG held a successful pre-conference course at CSM and has made strides in educating physical therapy professionals on the value of BPA's, and optimal ways of utilizing them in a multi-modal approach to patient management. He is also a board member of the International Society for Electrophysical Agents in Physiotherapy, a specialty group of World Physiotherapy. His research focuses on the use of extracorporeal shockwave therapy in rehabilitation, electrophysical agents, caregiver burden, exercise in stroke survivors, sleep interventions for stroke survivors, and rehabilitative interventions for individuals with Ehlers-Danlos Syndrome.
